the depersonalising Axon.
The Axon's tendril-hands
flail across the GUARD'S
FACE ... energy transference
crackle ... the GUARD
falls ...

The Axon shuffles and lurches through the parked vehicles ... we see his dragging misshapen feet squidging along towards the entrance ...

Meanwhile, the BRIGADIER is examining the GUARD'S BODY.

The Axon reaches the entrance. A signpost indicates the way:

"Main Research Reactor".

The Axon stumbles along the gravel path leading to the Reactor.

The BRIGADIER arrives at the entrance.

No sign of the Axon ... but dragging footmarks in the gravel lead towards the main Reactor ...

CUT

Ext. Approach to Main Reactor. Day.

TWO UNIT GUARDS are outside the doors to the main Reactor. They look about carefully and then dodge into the entrance for a quick cigarette.

As they are hunched over it, pretending to examine the padlocks, ONE OF THEM hears the shuffling sound of the Axon's feet. He turns round ... surprise, then horror. He shakes his MATE, unable to speak. At first his MATE pushes him away ... Then he too turns round.

Omigawd! The Axon is now absolutely terrifyingly lumpen and tendrilly. It drags itself inexorably towards them.

They fire shot after shot at it.

No effect.

It reaches them. Tendrils flail. Energy transfer crackle.

They scream and fall.

The Axon takes hold of the padlocks. Energy transfer crackle. The locks fly open.

The Axon goes into the Reactor.

The BRIGADIER appears as the doors close ... after a look at the GUARDS, he goes up to the doors, looks in ... a blinding flash of light ... and the "zizz" begins.

The BRIGADIER staggers back, recovers, and hurries off back towards the laboratory.
